

Mobile CRM Platform

MVP Product Specification — Version 1.0

01 Product Overview

This mobile-first CRM platform is designed for entrepreneurs, freelancers, and small to medium-sized businesses (SMBs) with anywhere from 1 to ~500 employees. The product fills a critical gap in the market: existing platforms like Bitrix are powerful but built for large corporations with dedicated IT departments, while simpler tools lack necessary functionality. This platform offers the right balance — powerful enough to run a real business, simple enough that anyone can start using it within minutes, and mobile-first for teams working in the field.

Target Users	Platform	Competitors	Philosophy
1 – 500 employees	Mobile (iOS & Android)	Bitrix, Salesforce, HubSpot	Simple. Visual. Powerful.

02 Market Problems

- **Enterprise tools are too complex**

Platforms like Bitrix require IT departments, months of onboarding, and large budgets. Small businesses cannot afford this overhead.

- **No mobile-first CRM for SMBs**

Most small companies operate primarily from smartphones, but existing CRM tools are built for desktops with mobile as an afterthought.

- **Either too simple or too expensive**

Lightweight tools lack critical features, while powerful platforms charge enterprise prices. There is no middle ground.

- **Not suited for non-technical users**

Business owners and their teams are not developers. They need software that works without training or technical background.

- **Difficult adoption and implementation**

Even good tools face resistance if they require changing workflows, filling out complex forms, and retraining teams. People are reluctant to change habits.

03 Core MVP Features

1. Contact Management & Customer Database

The foundation of the CRM. Every customer, lead, and prospect lives here.

- Centralized database of all contacts — customers, leads, partners
- Customizable contact profiles: name, company, phone, email, notes, tags
- Quick search and filter by any field
- Import contacts from phone, CSV, or email
- Assign contacts to team members
- Full history and activity for each contact

2. Sales Pipeline & Deal Tracking

Full visibility into every deal from first contact to closed sale.

- Visual Kanban-style pipeline boards — drag and drop deals between stages
- Customizable pipeline stages (e.g. Lead → Qualified → Proposal → Closed)
- Deal value tracking and revenue forecasting
- Multiple pipelines for different products or services
- Deal history and activity log
- At-a-glance view of all active deals and their current stage

3. Task Management & Reminders

Keep the team on track with organized tasks and automated follow-up reminders.

- Create, assign, and track tasks for any contact or deal
- Set due dates and priority levels
- Automated reminders via push notification
- Visual task board showing what is pending, in progress, and done
- Recurring task support for regular follow-ups
- Team task visibility — see what everyone is working on

4. Call & Messaging Capabilities

Reach out to customers directly from within the app without switching tools.

- One-tap call directly from a contact profile
- Built-in messaging — send SMS or in-app messages
- Log calls automatically to the contact's history
- Call notes — add context immediately after a call

→ Notification when a customer replies

5. Customer Interaction History

A complete timeline of every touchpoint with every customer.

- Full chronological log of all calls, messages, meetings, and notes
- Automatically captured — no manual entry needed
- Filter history by type (calls, messages, tasks, meetings)
- Shared history so any team member can pick up where another left off
- Attach files or documents to a contact's history

6. Appointment & Meeting Scheduling

Schedule and manage meetings without back-and-forth communication.

- Built-in calendar for scheduling appointments
- Send meeting invites directly from the app
- Automated reminders for upcoming meetings
- Sync with phone calendar (Google Calendar, Apple Calendar)
- View team availability to avoid scheduling conflicts
- Meeting notes saved directly to the contact's profile

7. Sales Funnel & End-to-End Lead Analytics

Understand exactly where leads come from, where they drop off, and how to improve.

- Full funnel visualization from first contact to closed deal
- Conversion rate at each stage of the pipeline
- Average time a deal spends in each stage
- Lead source tracking — where are customers coming from?
- Win/loss analysis — why are deals being won or lost?
- Revenue reports: monthly, quarterly, custom date range

8. Basic Reporting & Dashboard

Simple, visual reports that give business owners the information they need at a glance.

- Home dashboard with key metrics: active deals, tasks due today, recent contacts
- Sales performance reports
- Team activity reports
- Customizable dashboard widgets
- Export reports as PDF or CSV

9. Mobile Field Access

Built for teams working on the go — not just at a desk.

- Full CRM functionality on iOS and Android
- Works offline with sync when connection is restored
- Fast, touch-optimized interface designed for small screens
- Push notifications for tasks, reminders, and messages
- Location tagging for field visits

10. Visual Kanban Boards (Trello-Inspired)

Make complex workflows simple and visual — anyone can understand the board at a glance.

- Drag-and-drop boards for both sales pipeline and task management
- Color-coded cards for easy prioritization
- Assign team members to cards
- Add due dates, notes, and attachments to any card
- Filter and sort by team member, date, or priority
- Intuitive enough to use with zero training

11. Smart Data Entry & Auto-Fill

Minimal friction when adding information — people add data however is convenient for them.

- Pre-filled default fields — don't require everything upfront
- Flexible data entry: voice notes, photos of business cards, quick text
- Don't require all fields to be mandatory — let people fill in gradually
- Clear guidance and examples for each field
- Support import from phone contacts, email, CSV

12. Automatic Information Capture

Don't make people manually enter what the system can collect automatically.

- Automatically log calls to the contact's history
- Automatically save SMS and in-app messages
- Extract information from emails (if integrated with email)
- Auto-create notes after meetings
- No manual data entry where it isn't necessary

13. Customizable Workflows & Stages

The system adapts to your business, not the other way around.

- Fully customizable pipeline stages for different deal types

- Custom fields for contacts and deals
- Rules and automation: when status changes, do X
- Different processes for different teams or departments
- Save your deal and contact templates for quick reuse

14. Built-In Learning & Assistance

People learn as they work, without requiring external training.

- Contextual hints and tooltips at the right moment
- Embedded video tutorials for complex features
- Ready-to-use examples and templates
- Help and FAQ available with one click
- Smooth learning curve — start with basics, unlock more as you go

04 Target Users

User Type	Team Size	Primary Needs
Solo Entrepreneurs & Freelancers	1 person	Need simple contact tracking, follow-up reminders, and basic pipeline management.
Micro-Businesses	2–10 people	Small teams needing shared contact databases, task assignment, and basic reporting.
Small Businesses	10–100 people	Need full pipeline management, team coordination, interaction history, and analytics.
Medium Businesses	100–500 people	Need multi-department access, advanced analytics, permissions management, and deeper reporting.

05 Competitive Advantage

✓ Mobile-First Design	Built for phones from day one. Not a desktop app ported to mobile.
✓ Zero Learning Curve	Intuitive enough that a business owner can start using it the same day without training.
✓ Affordable Pricing	Priced for small businesses, not enterprise budgets.

✓ No IT Department Required	Setup and management requires no technical knowledge whatsoever.
✓ Visual & Intuitive	Kanban boards and visual dashboards make complex business data easy to understand at a glance.
✓ All-in-One	Contacts, pipeline, tasks, messaging, scheduling, and analytics — all in one app.
✓ Adapts to You	The system works by your rules, not forcing you to change habits. Flexible forms, automatic data capture, customizable workflows.
